Maximum Marks	3 Marks

Customer Problem Statement

The Customer Problem Statement helps identify the user's needs, challenges and expectations. Understanding the customer's point of view enables the development of an AI-powered solution that accurately evaluates conceptual understanding through spoken explanations and provides meaningful feedback.

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A student preparing for examinations and concept-based learning.	Explain concepts verbally and evaluate my understanding.	Traditional exams mainly assess written answers and provide limited feedback.	Existing systems cannot accurately measure conceptual understanding through speech.	Unsure whether I truly understand the topic and lack confidence in my preparation.

PS-2	A teacher or trainer assessing student knowledge.	Evaluate multiple students quickly and fairly.	Manual evaluation takes significant time and effort.	There is no automated AI-based tool for analyzing spoken explanations.	Difficulty providing timely and personalized feedback.
PS-3	An educational institution.	Improve learning outcomes using intelligent assessment methods.	Existing assessment methods focus only on written performance.	Limited insight into students' conceptual understanding and communication skills.	Unable to accurately identify learning gaps and provide targeted improvements.
